Projects

You already organize your files in folders.

Why not add an extra file organizing your R sessions?

Project file . Rproj

- Automatically setwd()
- Load .Rdata environment
- Load .Rhistory
- Easily switch between projects
- Build packages
- Versioning with git

Versioning

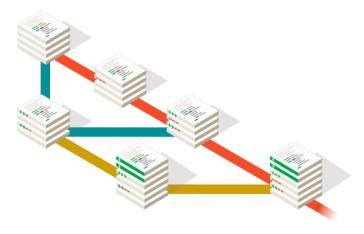

edit -> save as
File name includes date and message

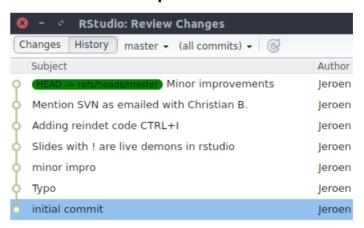

Versioning with Git

edit -> save -> stage -> commit
Commit includes date and message
Versioning tools like git keeps track of file changes
